DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14 and 26-35, drawn to a mechanical pipe joint and a method of sealing and axially securing a male pipe member within an adjoining bell socket along an axis, classified in class 285, subclass 337.
- II. Claims 15-25 and 36-44, drawn to a restraining gasket, classified in class 277, subclass 602.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because claims 1 and 26 do not require the limitation "an interface between the sealing portion and the restraining portion, the interface being adapted to distribute an axial attachment force exerted by the bearing surface of the gland on the restraining portion to prevent a premature engagement of an outer surface of the male piping member by the plurality of circumferentially-spaced arcuate locking members" as claimed in claim 15, or the limitation "a raised portion

Art Unit: 3679

disposed circumferentially on a radially-outward surface of the at least one arcuate locking member such that the raised portion provides a reduced surface area for reducing friction between the radially-outward surface of the at least one arcuate locking member and the bearing surface of the gland as claimed in claim 36. The subcombination has separate utility as a seal between two non-piping members.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
